

SIH 2026

5 Best AI Tools for Diagrams, Flowcharts & System Architecture

1. Eraser.io (DiagramGPT)

Type a prompt like “user login flow with OTP and JWT” and it auto-generates a clean architecture or flowchart diagram. Built specifically for system design, making it the most AI-native tool in this category.

Best for: Fast, accurate system architecture diagrams for SIH tech-stack slides.

Website: www.eraser.io

2. Whimsical AI

Has a built-in AI assistant that generates flowcharts and mind maps directly from text prompts, which you can then drag-edit to refine.

Best for: A balance of AI speed with manual control over layout.

Website: whimsical.com

3. Napkin.ai

Paste in a paragraph of text, such as your problem statement, and it automatically converts it into a visual diagram or flow.

Best for: Turning written SIH content into visuals fast.

Website: www.napkin.ai

4. Miro AI

Miro's AI Sidekick generates diagrams, flowcharts, and mind maps from prompts directly on an infinite canvas.

Best for: Teams already collaborating together on a shared Miro board.

Website: miro.com

5. Lucidchart AI

Its “diagram from text” feature lays out shapes, connectors, and labels automatically from a written system description.

Best for: Detailed, enterprise-polished, multi-component architecture diagrams.

Website: www.lucidchart.com

Bonus: Mermaid.js + AI (free)

Ask any AI chatbot to “generate a mermaid.js diagram for X flow,” then paste the resulting code into mermaid.live for an instant, clean diagram at zero cost.

Website: mermaid.live

Quick ranking for your SIH carousel

- Eraser.io — fastest and most accurate for system architecture

- Napkin.ai — best for converting existing text or notes into visuals
- Mermaid + ChatGPT/Claude — best free option, most flexible

SIH 2026 PPT Rules & Guidelines

Format rules

- Maximum 6 slides — the official rule caps the idea presentation at 6 pages.
- Use the official SIH template provided during registration; do not build from scratch.
- Presentations must be uploaded as PPT / PPTX / PDF before the submission deadline set by your SPOC.

Recommended slide structure

- Title slide — team name, problem statement ID, and title
- Problem statement — what challenge you are solving, stated simply
- Proposed solution — your “big idea” in 2–3 lines
- Technical approach / architecture — use a flowchart or block diagram, not paragraphs
- Feasibility & viability — show this is realistic to build and scale
- Impact & benefits — who it helps and the measurable outcome

Content rules

- Keep it simple, innovative, and precise — avoid long paragraphs of text
- Use diagrams, infographics, and bullet points to explain the workflow
- Judges should understand your problem within the first few seconds of slide one
- Show a working prototype where possible, not just mockup screenshots

Evaluation is commonly weighted around

- Problem understanding & impact
- Innovation & technical excellence
- Feasibility, practicability & scalability
- Solution quality & presentation

Note: exact weightings, slide caps, and templates vary slightly by year and by nodal center/SPOC — always confirm against the current official SIH template and guidelines shared by your coordinator before finalizing your deck.
