

SMART INDIA HACKATHON

SIH WINNERS VAULT

Winning Presentations • Complete Source Code • Video Walkthroughs

2020 — 2025 EDITION

Curated & Compiled by TECHDOODLES

Welcome to the Vault

This document is a curated, ready-to-use resource pack for Smart India Hackathon aspirants — built by Techdoodles. Every entry below is a clickable link: tap any title or button to open the presentation, repository, or video directly.

01 **Winning PPT Collection**
8 award-winning presentations, 2023–2025

02 **Source Code Vault**
25 complete GitHub repositories

03 **Video Walkthroughs**
Hand-picked breakdowns & explainers

04 **Bonus: Tips to Win SIH**
Insider strategy notes

How to use: Click any blue title to view the PPT / repo / video in your browser. This PDF works best opened in Adobe Acrobat, Chrome, or any modern PDF viewer with hyperlink support.

04 Bonus: Tips to Win SIH

Strategy notes distilled from studying multiple winning teams.

- ★ **Pick the problem statement, not the trend**
Choose a PS your team can genuinely execute well in the given time, rather than the one that sounds most exciting. Feasibility beats hype in evaluation rounds.
- ★ **Lead with the problem, not the tech stack**
Winning decks spend the first 2-3 slides making the jury feel the problem's scale and urgency before any solution or architecture is shown.
- ★ **Show a working prototype, always**
Even a partial, rough demo beats a fully 'imagined' solution. Judges consistently rank teams with something clickable or runnable higher than pure-slideware teams.
- ★ **Keep slides visual, not textual**
Use flow diagrams, architecture visuals and screenshots instead of paragraphs. Every slide should be understandable in under 10 seconds.
- ★ **Have a clear 'Uniqueness' slide**
Explicitly state what makes your solution different from existing government/market solutions — juries actively look for this comparison.
- ★ **Rehearse the Q&A, not just the pitch**
Most teams over-prepare the presentation and under-prepare for questions on cost, scalability and feasibility. That's usually where marks are lost.
- ★ **Keep the README as strong as the PPT**
For source code, a clean README with setup steps, tech stack and screenshots signals credibility to evaluators who check GitHub links.
